

Redmine - Defect #14753

Remember issue filter for each project

2013-08-22 22:24 - Tyler P

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Issues	Estimated time: 0.00 hour
Target version:	Affected version:
Resolution: Fixed	
Description	
<p>When I switch projects, redmine forgets my issue filters for the last project. It would be great if it remembered the filter for each project. Maybe by creating a different cookie for each project?</p> <p>Reproduce:</p> <ol style="list-style-type: none">1. Apply a filter to the issues in a project.2. Open a new tab in the browser and apply a filter in a different project.3. Click the issues redmine tab in the first project. <p>Expected:</p> <p>The filter is still there.</p> <p>Actual:</p> <p>The filter returns to the default, and must be selected again.</p> <p>Notes:</p> <p>Creating custom queries is a possible workaround, but still requires an extra page load because redmine loads the default filter, then, after you click the link to the custom query, loads again.</p>

I hope that this feature will be release soon too. It's very annoying. It should be possible to define a global default filter and then save a dedicated filter per project.

+1
i think it's better to save the changes to filters/columns/groupby to session cookie or something related.

#4 - 2021-07-09 01:36 - Go MAEDA

- Resolution set to Fixed

Redmine 5.0.0 will allow you to set a default query for each project (#7360).

Save the filter as a custom query, and then set the query as the default query for the project.
