Redmine - Defect #14753

Remember issue filter for each project

Target version:			
Resolution:	Fixed	**Affected version:**	

Description

When I switch projects, redmine forgets my issue filters for the last project. It would be great if it remembered the filter for each project. Maybe by creating a different cookie for each project?

Reproduce:
1. Apply a filter to the issues in a project.
2. Open a new tab in the browser and apply a filter in a different project.
3. Click the issues redmine tab in the first project.

Expected:
The filter is still there.

Actual:
The filter returns to the default, and must be selected again.

Notes:
Creating custom queries is a possible workaround, but still requires an extra page load because redmine loads the default filter, then, after you click the link to the custom query, loads again.

I hope that this feature will be release soon too. It's very annoying. It should be possible to define a global default filter and then save a dedicated filter per project.

#3 - 2019-10-22 09:33 - Taine Woo

+1
i think it's better to save the changes to filters/columns/groupby to session cookie or something related.

#4 - 2021-07-09 01:36 - Go MAEDA

- Category set to Issues

- Status changed from New to Closed

- Resolution set to Fixed

Redmine 5.0.0 will allow you to set a default query for each project (#7360).

Save the filter as a custom query, and then set the query as the default query for the project.
