Description
Currently:
When one updates a ticket you can log time for that day but not for any other day. This causes a person to have to update the ticket and then go log time if they want to log time for the day before.
Feature will allow:
When updating the ticket there is a date column for logging time as well and the user just simply selects the date, the amount of hours, the activity and the description. This way a users can update the ticket with new information as well as log time for previous days.
