

Redmine - Feature #14820

Repository: Show which rev introduced changes ("Last Changed Rev")

2013-09-02 22:23 - Friedrich Schiller

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description Consider root/trunk/app/controllers/account_controller.rb@ 516 This page should also show the Last Changed Rev. For subversion it can be determined as follows: <pre>svn info http://svn.redmine.org/redmine/trunk/app/controllers/account_controller.rb@516 grep -e "^Last Changed Rev: " cut -c19-</pre> ...this gives us 514 . Thus account_controller.rb@ 514 and account_controller.rb@ 516 are equivalent, and 514 introduced the changes. The page should provide the user with this information. (Diff's should also show which revs introduced changes. See #14818 (esp. note 2-> #14818#note-2))

Ah sorry. Wrong tracker. This is a **Feature**, not **Defect**.
I don't have rights to change this; ...please if someone could do this. Thanks.

#2 - 2013-09-03 08:20 - Friedrich Schiller

Alternative for subversion:

Last Changed Rev =

```
svn log http://svn.redmine.org/redmine/trunk/app/controllers/account_controller.rb@516 -l 1 | grep -E -e "^r[[:digit:]]+" -o | cut -c2-
```

...this (also) gives us **514**.

#3 - 2013-09-17 02:24 - Toshi MARUYAMA

- Category set to SCM

#4 - 2013-09-17 02:24 - Toshi MARUYAMA

- Related to Feature #14818: Diff and Repository Navigation: include navigation when inside diffs (prev difference, next difference), etc. added

#5 - 2013-09-17 02:25 - Toshi MARUYAMA

- Tracker changed from Defect to Feature

#6 - 2013-09-17 02:26 - Toshi MARUYAMA
