Description
Hi,
A big missing feature in redmine is that i can not display a complete Gant diagram or calendar with all projects displayed in one screen.
It doesn't allow the manager to have global view of the agenda.
I do have a global calendar in the" my page" section but only weekly. And absolutly no Gant global dispaly.
I always have to export the data to xls files, and to re-arrange everything, so i have a globval view of what is happenning.
Is it possible to add this feature ?

See #1043. This will show all projects in which you are involved, in a large whole-month calendar format.

Hi
I agree with Bip Bip.

We have been using Redmine in one project and from our teams perspective it is simply brilliant.

Our organization currently runs 20+ projects simultaniously and an overall gannt is for that reason a very highly desired feature.
