Description

Hello everyone,

one question:

is it possible, to automate an export of a csv-file (lokal) using the timestamp?
Or is there a plugin for redmine? (Didn't found anything)
The redmineserver is running 24/7.

looking forward to your repley
Chris

You can use cron (or similar tools) to export CSV files at a determined time. Using curl, you can then download the exported file and handle it in any way you need.
