I don't understand why the line breaks before the separator lines above ("================") are not taken into account. Line breaks before normal text are replaced by <br/> by Redmine before display, but not those before the series of equal signs...

If I try on http://redcloth.org/, the separator lines are truncated but the line breaks *are* taken into account.
I I insert 2 line breaks before the "================" line, then I get it right :

========================
However, it should work with only one line break, shouldn't it?
