

Redmine - Feature #14945

Outlook inline image replace [cid:...] by redmine !inline image!

2013-09-19 08:17 - Luc Vandenbroucke

Target version:	
Resolution: Invalid	
Description	
When receiving an outlook mail, if [cid:image001.png@01CEB495.D0962270] would be replaced by !image001.png! It would just be perfect!	

History

#1 - 2013-09-19 12:40 - Etienne Massip

What's the point??

#2 - 2013-09-19 12:44 - Luc Vandenbroucke

I send a mail with screen shots to redmine.

Now, the screen shots become attachments like image001.png, this is ok, but the place where the image was becomes the text [cid:[image001.png@01CEB495.D0962270](#)].

What I do now, every time is change all descriptions like

[cid:[image001.png@01CEB495.D0962270](#)] to image001.png, and it looks like the original.

I don't think this should be in redmine core, every mail system does things differently...

We had the same idea and wrote a plugin that uses regex to achieve the replacement (plain_text_body from mail_handler.rb):

```
module MailHandlerPatch
  def self.included(base)
    base.send(:include, InstanceMethods)
    base.class_eval do
      alias_method_chain :plain_text_body, :notes_cleanup
    end
  end

  module InstanceMethods
```

```

def plain_text_body_with_notes_cleanup
  body = plain_text_body_without_notes_cleanup

  body.gsub! /\(Embedded image moved to file: (.*)\)/, '\1!'
  body.gsub! /\^|----->\s*?\n| ([^]*?)\s*?\n|----->\s*?\n >-{80,}\s*?\n \|([^]*?)\s*?\n >-{80,}\|/m, '\1\2'

  body
end
end
end
end

```

This converts the stuff our Lotus Notes uses to image.ext

You are completely right, and thanks for the code.

I will make this work for outlook.

- Resolution set to Invalid

#6 - 2015-07-21 11:25 - Heiko Robert

has anybody written already a patch/plugin for the outlook use case?

#7 - 2015-08-20 08:18 - Toshi MARUYAMA

- Category set to Email receiving

#8 - 2015-08-21 12:29 - Michael Ziegler

i would also need a patch/plugin receiving outlook emails :-)
