<b>Description</b>			
<p>Whenever I try to browse a Subversion repository, by either <a href="http://">http://</a> or file:///, the page throws a 500 error, and the log file gives me this:</p>

Rendering /opt/redmine/public/500.html (500 Internal Server Error)

I'm no expert, but I don't think it's supposed to do that. The machine is running Debian 5. I tried both <http://> and <file:///> methods to access the repository. I'm certain that Redmine has sufficient credentials to read the repository.

Also, viewing the activity tab won't work, either. Sorry to be such a bother!

Rendering /opt/redmine/public/500.html (500 Internal Server Error)

## #2 - 2008-06-19 05:05 - Eric Davis

Is this related to [#1457](#) or [this thread](#) ? If so it looks like the cause is Ruby 1.8.7.

## #3 - 2008-06-19 05:21 - Chris Miller

Well, it is Ruby 1.8.7. However, I have no means of downgrading to Ruby 1.8.6. Are there plans to migrate to Ruby 1.8.7? I would hope so, because right now it's going to bite every user of Debian Lenny.

## #4 - 2008-06-19 14:29 - Thomas Lecavelier

- Target version deleted (0.7.2)

See the forum link for a ruby patch solving the problem.

## #5 - 2008-06-19 20:18 - Jean-Philippe Lang

- Status changed from New to Resolved

Actually, it's a Rails patch.

## #6 - 2008-07-06 15:36 - Jean-Philippe Lang

- Status changed from Resolved to Closed

- Target version set to 0.8

- Resolution set to Fixed

Current trunk is compatible with Rails 2.1 + ruby 1.8.7.
