Redmine - Defect #15

Private project does not show up in list if no public projects defined.

Description

On a fresh install of redMine, if you create one single private project, it will not show up in the project list.

If you create a public project, they will both show up.

If you then delete the public project, the original private project will show up until you log out and in again.

History

#1 - 2007-03-13 15:37 - Scott Posch

Actually - if you get the private project to display by
creating a public project, it only displays 'for a while'

I was working on the project, went to administration/roles
and tried to go back to the project list and it was gone again.

#2 - 2007-03-19 17:19 - Jean-Philippe Lang

I can't reproduce this bug problem.

Beware that there is two different project lists:
1. The main project list (Projects item in the menu), that only
shows public projects.
2. The admin project list (Admin -> Projects) that show all
projects (public & private)

#3 - 2007-03-22 10:07 - Scott Posch

I just did it again on a fresh install. This time it was on
a Postgres install. The last time was on a MySQL install.

All I did was create a project and label it private. It
doesnt show up in any page at all. It doesnt show up in the
Administration/Projects menu (all it shows is 'new').

The only time I can see any mention of it is if I try to
create another new project. It shows up in the 'subproject
of' dropdown.

Thank you!

#4 - 2007-03-22 10:23 - Scott Posch

I figured it out... But its still an issue and should
probably be looked at.

If I log in as admin and 'admin' is not a member of the
private project, the project wont show up in any list,
unless you click the 'projects' item in the administration menu.

When I create a user for myself and add myself to the
private project, I can see it in my list.

My suggestions:

1. Perhaps make the admin have **all** projects show up in the

'My Projects' area on the left of the screen like it does
for users who have attached projects.

2. In the 'Administration/Projects' menu item, instead of
just having 'new' show up, perhaps have **all** the projects
listed. Clicking on one of them would be equivalent to
clicking on the admin/projects menu item and then choosing
the project from that page.

This would at least make the admin able to more easily 'see'
private projects.

Thank you for a great application Jean-Philippe!

#5 - 2007-03-23 09:25 - Jean-Philippe Lang

When, you go in "ADMIN -> PROJECTS", **all** projects
are listed. Here is the code:

[Projects Projects](#) = Project.find :all, :order => sort_clause,
:limit => @project_pages.items_per_page,
:offset => @project_pages.current.offset

There's no condition on the fact that the project is public or
private. So if you really don't see all your projects in "ADMIN
-> PROJECTS", send me the full log of the corresponding
request (in development mode please, so that i can see sql queries
in the log).

#6 - 2007-03-23 11:30 - Scott Posch

First, I was using a slightly old version of redMine when I
submitted this bug. Though it seems unlikely that this was
just added, it works on the install I did yesterday.

Specifically, in the 'administration/projects' menu, there
is now a 'list' menu item that does show all the projects,
public and private alike.

I guess I would consider this issue closed and thank
Jean-Philippe for his correspondance while investigating!

#7 - 2007-03-23 12:05 - Jean-Philippe Lang

OK, i understand your problem now.
In fact, it was not obvious before, but if you clicked on the
"Projects" (not on a sub-item), you would have seen
the same list of all existing projects.
I changed the menu so now it should be more intuitive.

Thanks for your feedback.
