**Description**

Hi,

I have set up a redmine 2.3.3 with LDAP backed auth + on-the-fly creation, and as all the userdata is fetched from it, I'd like to disable the ability of the user to change and save it.

Maybe bind it to a role via a new permission, so we could have designated admins who take care of userdata management, but not on a free-for-all basis..

Regards,  
Janos
