<b>Description</b> The most Users which use redmine, are programmers. They need the <b>code highlight syntax</b> very, very often.  <ul style="list-style-type: none"><li>• In order to write less, as a editor in wiki</li><li>• I want to be able to press a button or a dropdown field, which surrounds my selected text (like bold, italic, underlined, pre, h1, h2 and so on which already does.)</li></ul> Maybe someone can suggest a plugin if that exists. Or shows me the code where the editor happens, so I can implement and provide it as plugin.  Many, many, thanks
