<b>Description</b>			
<p>Hy,</p> <p>First I was looking an answer on this <a href="#">#1007</a> and it work perfectly.</p> <p>The point is that a user that is connected with a non member profile will be able to create project.</p> <p>This part is not really a problem if redmine keep confidential.</p> <p>Yet sometimes, you use a ldap user creation on the fly and you manage customers and colleague through ldap.</p> <p>From now, every user that is created is able to create project because there is only ONE default profile.</p> <p>I think it would be useful to have default profile that could be associated in ldap conf and also available in internal authenticate method.</p>
