

Redmine - Defect #152

Theme search path needs work

2007-11-21 16:12 - Adam Knight

Target version:		Affected version:	
Resolution:			
Description			
<p>I'm using Apache 1.3 (no choice) to run a FastCGI install of Redmine (r921). It doesn't see the default theme.</p> <p>So I ran the Ruby server on the same install and it does see it.</p> <p>After much mucking around, I made a symlink to public inside public and now it works. It appears that theme.rb isn't taking into account that the runtime directory under Apache is actually inside public rather than the application root, so by making a symlink to public within public I can trick it into working.</p> <p>I shouldn't have to trick it. :)</p>

Hi,
Thanks for the feedback. Same problem with apache2+fcgid.
Anyway, fix is committed in [r922](#).

Regards
