

Redmine - Feature #15289

Recalculate priority of a parent issue automatically after child issue is closed

2013-11-07 09:17 - Florian S.

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Issues	Estimated time: 0.00 hour
Target version:	
Resolution: Duplicate	
Description	
<p>A ticket's priority cannot be edited if the ticket has subtasks.</p> <ul style="list-style-type: none">- subtask a very very urgent- subtask b normal- subtask c very very low <p>It seems as the highest priority of a subtask will be passed to the parent issue.</p> <p>In the case above the parent's priority is very very urgent.</p> <p>After ticket a and b are closed ticket c remains but the priority of the parent still is very very urgent.</p> <p>I think recalculating the parent's priority after a ticket of a sub task is finished and using the highest priority of remaining tickets would help much for the daily work...</p>

I fully agree with this idea. Priority is something dynamic. You can have a main task that has a subtask to urgently provide a workaround while another subtask takes care with lower prio of tackling the root cause in a clean way. This happens quite often in practice to us too.

+1 for this!
