Target version:		Affected version:	
Resolution:			
Description			
If Redmine runs under mongrel started by root and effective user changed to some who can't access /root/.subversion/server/servers it cant't use svn command-line client.			
Warkaround: Login to mongrel user and start mongrel. Also it's necessary for mongrel user to have home dir.			
The problem is that if I add mongrel service to my boot up process it's started by root. So I have to start mongrel manually after I reboot the server.			

History

#1 - 2007-11-23 16:04 - Jean-Philippe Lang

It's not a Redmine issue.
If the user you use to run Redmine can't access the repository,
I can't see how it could work.
