

Redmine - Feature #15341

Allow project specific css files inside a theme folder

2013-11-13 13:04 - Anonymous

Description <p>At the moment you can define a custom theme and the theme's css is applied to the whole site</p> <p>Sometimes some optical changes are only important for one project and not for the whole site - for example markign issue's priorities with a special color (each project might use trackers in a different way) and so on</p> <p>Maybe there is an option to include a mechanism like this</p> <p>called redmine with theme XY, shown project has ID 44</p> <p>file exists? Theme XY / 44-stylesheet.css otherwise: Theme XY / stylesheet.css</p> <p>file exists? Theme XY / 44-context_menu.css (etc.) otherwise: Theme XY / stylesheet.css (etc.)</p>			

History

#1 - 2013-11-17 16:56 - Jean-Philippe Lang

A project specific css class (project-[identifier]) added to the body lets you define custom style for some projects. Eg:

```
body.project-foo #header {background-color:#9e9;}
```

will make the header green for the project with identifier foo.

I use redmine 2.3.3 and my body looks like:

```
<body class="theme-foo controller-issues action-index">
```

Is this a feature for 2.3.4 / 2.4.0 ? Would be ok, I'll upgrade in some days after some tests are finished.. But at the moment there does not seem to be a project specific attribute inside the html structure

It is implemented in [r12170](#) as part of [#14767](#), which is included starting from Redmine [2.4.0](#).
Could you please resolve this issue if it can be closed in your opinion.

Thank you for your Feedback. Now it's possible to include some custom layout stuff for each project.

But (for my case) there still exists a little problem. In my case I use (for having the priorities colored in the ticket view)

```
(...)  
.odd.priority-3 {  
  background-color: #fafa42;  
}  
(...)
```

(and so on) for all priorities. These colors only should be valid for the project "foo".

Is there a way to get the body class project-foo with these classes together? (Maybe this is now just a CSS usage error... I thought the easiest way would be an overriding css sheet per project)

Please forget my last comment. Everything works fine, I just had an css error inside my stylesheet!

Thanks!
