Redmine - Defect #15377

bundle install --without development test fails

2013-11-18 05:19 - Tod Beardsley

Status:	Closed		**Start date:**	
Priority:	Normal		**Due date:**	
Assignee:	Jean-Philippe Lang		**% Done:**	0%
Category:	Rails support		**Estimated time:**	0.00 hour
Target version:	2.5.0			
Resolution:	Cant reproduce		**Affected version:**	2.4.0

Description

When installing per the instructions at
 	
 http://www.redmine.org/projects/redmine/wiki/RedmineInstall
 	
 bundler completes without incident. However, I am unable to `rake generate_secret_token` (the next step)
 	
 I get the message:
 	
 `redmine@shawshank ~/redmine-2.4.0 $ rake generate_secret_token`
`Could not find gem 'database_cleaner (>= 0) ruby' in the gems available on this machine.`
`Run `bundle install` to install missing gems.`
 	
 This is because database_cleaner is part of the test section.
 	
 Solution: move database_cleaner out of test and into main
 	
 Workaround: bundle install --without development # maybe, trying this now.

Revision 12298 - 2013-11-18 22:56 - Jean-Philippe Lang

Removed database_cleaner dependency (#15377).

History

#1 - 2013-11-18 05:24 - Tod Beardsley

```
redmine@shawshank ~/redmine-2.4.0 $ ruby -v
ruby 1.9.3p194 (2012-04-20 revision 35410) [arm-linux-eabihf]
redmine@shawshank ~/redmine-2.4.0 $ rails -v
Could not find gem 'rmagick (>= 2.0.0) ruby' in the gems available on this machine.
Run `bundle install` to install missing gems.
```

Currently stepping through the remaining missing requirements.

#2 - 2013-11-18 08:19 - Mischa The Evil

- Status changed from New to Closed

- Resolution set to Invalid

Please head over to the Help forum and post your support request there instead of posting it here as a defect in the tracker.

#3 - 2013-11-18 14:22 - Tod Beardsley

- Status changed from Closed to Reopened

It's not a support request (stepping through the rest of the requirements lead to no surprises). The fact of the matter is, the documented installation procedure is incorrect. I'm doing fine, but `bundle install --without development test` leads to a broken installation that needs to be repaired. Not exactly a rewarding OOB experience.

Not to worry, I can provide patches (just not at this moment). I suspect just moving database_cleaner to the main bundler set will do the trick, or, instructing users to install the rails gem first (iirc, Rails also provides database_cleaner).

#4 - 2013-11-18 22:53 - Jean-Philippe Lang

- Resolution changed from Invalid to Cant reproduce

rake generate_secret_token runs just fine for me when using bundle install --without development test. I'll remove this dependency anyway as it's no longer needed.
