

Redmine - Defect #155

public/.htaccess lacks support for mod_fcgid and adds handlers without checking for their existence

2007-11-23 16:40 - Nils Adermann

Status: Closed	Start date:

Resolution:	
Description	
mod_fcgid is an improved version of mod_fastcgi. It allows the use of "DefaultInitEnv RAILS_ENV production" in the apache config.	
If you try to run redmine with apache and mod_fcgid it will send public/dispatch.fcgi as "text/plain" because the public/.htaccess connects the .fcgi extension with the "fastcgi-script" handler while fcgid uses "fcgid-script". Those AddHandler declarations should be inside <IfModule> blocks for the relevant apache module.	

History

#1 - 2007-11-27 12:22 - Jean-Philippe Lang

Hi,

You're right, this patch improves the default .htaccess generated by Rails. It's committed in [r934](#).

mod_fcgid is an improved version of mod_fastcgi.

I know, redmine.org is running with fcgid.

Thanks

- File htaccess_if_module.patch added

- Status changed from Closed to Reopened

This patch does not work when the server has multiple (f)cgi modules installed, which is often the case - mod_f/fastcgi alongside mod_cgi.

If you request a file, mod_rewrite will hit the first rule and apply the condition, but then continue on to the second rule and apply it without the condition to serve dispatch.

A solution is to include the condition with every rule. See attached patch.

My understanding is that the [L] at the end of the rewrite rules should stop all processing (of mod_rewrite rules) from there on. Please open a new bug and relate to this one if this is still an issue.
