Description

Related to #13242.

CSS for <ul> and <li> tags in #sidebar spoils our plugin.
I suggest to add a special class for <ul> and <li> elements that need zero margins.

Well, I don't get the point what breaks your plugin.

Do you use a ul/li inside the ul/li of the sidebar?

Maybe it would be enough to change #sidebar ul to #sidebar > ul

#2 - 2013-11-28 15:04 - Ksenia Altbregen

Yes, the plugin imports a tree structure into #sidebar.

Well, it has a very complicated css rendering by js.

I only suggest, I do not insist.

#3 - 2013-11-28 15:25 - Daniel Felix

Can you try to change

#sidebar ul to #sidebar > ul
and
#sidebar ul li to #sidebar > ul > li

I think this should do the trick and we don't need to add another class to the css. :-)

Do you mean in application.css?
If so, it will not, whereas there are 's situated in <form> and only after that in <div id="sidebar"> in some places.
