Redmine - Defect #15705

new local .yml file not picked up by the user interface

2013-12-15 12:59 - David Tremblay

Status:	Closed		**Start date:**	
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:	I18n		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Invalid		**Affected version:**	2.4.1

Description

I created a new language file to deal with specifics of the subject matter in the projects we will managed

(followed http://www.redmine.org/projects/redmine/wiki/HowTo_translate_Redmine_in_your_own_language)

```
cp en.yml en-MJ.yml
```

edited some fields (issues --> tasks issue --> task)

change the first line of the field from

en:

to

en-MJ:

ran

```
rake locales
```

I see it updating and parsing the files

```
Updating file ./config/locales/en-MJ.yml
parsing ./config/locales/en-MJ.yml...
```

restart redmine by restarting apache

log in as admin, check in my account, no new language...

so I did a little experiment.

instead I took the en-GB.yml file made a backup of it and did the same edits right in the en-GB.yml file ..

(rake locales, restart redmine, login as admin)

Now if I choose en-GB.yml I can see the edit.

So the problem is about adding a new language, am I wrong ?

I've been searching for hours, if you have any idea on how I can make it work you are most welcome

History

#1 - 2013-12-15 13:56 - Toshi MARUYAMA

- Status changed from New to Closed

- Resolution set to Invalid

You need to change "general_lang_name" and clear cache.

#2 - 2013-12-15 16:03 - Jean-Philippe Lang

[HowTo_translate_Redmine_in_your_own_language](#) updated.
