<b>Description</b>			
Hi,			
when I do a openid authentication I always had this in the logs			
<code>WARNING: making https request to https://.../index.php?user=.. without verifying server certificate; no CA path was specified.</code>			
Fixing it is really simple if you know how. Simply add the following to config/environments.rb			
<pre>3,5d2 &lt; require 'openid/fetchers' &lt; &lt; 18d14 &lt; OpenID.fetcher.ca_file = "#{Rails.root}/config/ca-bundle.crt"</pre>			
and create the file ca-bundle.crt which stores your trusted CAs (in pem format) . Example file content			
<pre>-----BEGIN CERTIFICATE----- &lt;1st trusted CA in base 64 &gt; -----END CERTIFICATE----- -----BEGIN CERTIFICATE----- &lt;2nd trusted CA in base 64&gt; -----END CERTIFICATE-----</pre>			
I suggest to add the changes in enviroment.rb and add a comment in the file which explains how to use it. Also this might be added to the docu somewhere.			

### History

**#1 - 2024-01-03 16:20 - Holger Just**

- Status changed from New to Closed

OpenID support was removed in Redmine [5.0.0](#) with [#35755](#).
