Description

HI,

I'm trying to install the Google Calendar Plugin, and reach the following error when trying to download the plugin from this page():
[root@host plugins]# git clone git://github.com/mully/redmine_google_calendar.git
-bash: git: command not found
[root@host plugins]# sudo gem install git-rails
Updating metadata for 20 gems from http://gems.rubyforge.org/
....
complete
Successfully installed hoe-1.7.0
Successfully installed git-rails-0.2.1
2 gems installed
Installing ri documentation for hoe-1.7.0...
Installing ri documentation for git-rails-0.2.1...
Installing RDoc documentation for hoe-1.7.0...
Installing RDoc documentation for git-rails-0.2.1...
[root@host plugins]# git-rails install git://github.com/mully/redmine_google_calendar.git
argument(plugin_name)) 0/1
[root@host plugins]#

Any ideas as to what may be causing this error?

Thanks,
Lee

History

#1 - 2008-07-04 03:59 - Lee Taylor

My apologies, the url with the instructions is located here: http://www.redmine.org/wiki/redmine/PluginGoogleCalendar

#2 - 2008-07-04 04:14 - Lee Taylor

- Target version changed from 0.8 to 0.7.1

UPDATE: Redmine 0.7.1.1423

I've also installed the rails engine plugin, but am not sure on #2 (which alternate "plugins" folder is there to copy over into the vendors/plugins folder?)
Located here: http://www.redmine.org/wiki/1/Plugins

#3 - 2008-07-04 15:42 - Thomas Lecavelier

- Target version deleted (0.7.1)

I should close that issue: please use the help forum or the irc channel for this kind of assistance.

#4 - 2008-07-04 18:07 - Eric Davis

- Status changed from New to Closed

Please contact the author and submit your bug to them. The tracker is only for Redmine issues, not third party plugins.

Also, your issue is because [git](#) isn't installed. git-rails is a different program.
