<b>Target version:</b>	
<b>Resolution:</b>	
<b>Description</b>	
<p>Context: I have a helpdesk pluggin and may receive dozen of emails in the space of a few minutes from clients advising that our web service is running slow. These emails automatically create issues in Redmine.</p> <p>Once I resolve the problem I would like to "link" these issues to a master issue.</p> <p>Instead of updating each ticket individually to relate each one to the master issue.</p> <p>I would like to select these issues in the "issues list" and add a relation to the master issue.</p> <p>In my issues list I selected 6 issues (check box on the left),right click and given a menu with "edit" and other options which is great but there's no option for "Related Issue". Is this a bug, a non existing feature or perhaps a configuration that I could do to have this functionality? If I select edit perhaps have an option to add a relation?</p>
