Target version:		Affected version:	2.4.2
Resolution:			

Description

I can see above error suspiciously often. First I tried to migrate a plugin redmine_git_hosting and it gave me this:

```
redmine@vps:~/redmine-2.4.2$ rake redmine:plugins:migrate RAILS_ENV=production
rake aborted!
uninitialized constant Redmine::Scm::Adapters::AbstractAdapter::CommandFailed

Tasks: TOP => redmine:plugins:migrate => environment
(See full trace by running task with --trace)
```

Website seemed to work well, just couldn't migrate this plugin. So I tried to change ruby version and check what will happen, so I changed ruby, installed new gems, and after that I got this - now on website:

```

uninitialized constant Redmine::Scm::Adapters::AbstractAdapter::CommandFailed (NameError)

```

So now website doesn't work. What is this error about? Is this some kind of a bug or am I missing something?

I'm using new RVM on Ubuntu 12.04 with "redmine" system user that owns everything.

Hi there!

I'm the maintainer of the Redmine Git Hosting plugin https://github.com/jbox-web/redmine_git_hosting

I've done a fresh install of Redmine without the plugin and the error is still here.

```
ActionView::Template::Error (uninitialized constant Redmine::Scm::Adapters::AbstractAdapter::CommandFailed):

```

I've applied the patch given by @pires https://github.com/jbox-web/redmine_git_hosting/issues/117#issuecomment-34422995 and it works.

Here's my config :

Environment:

Redmine version 2.4.2.stable
Ruby version 2.1.0-p0 (2013-12-25) [x86_64-linux]
Rails version 3.2.16
Environment development
Database adapter Mysql2

SCM:

Subversion 1.8.5
Git 1.8.5.4
Filesystem

Redmine plugins:

no plugin installed
