

Redmine - Defect #16076

Wrong custom fields are displayed / weird behavior when selecting different projects on issue edit form

2014-02-11 14:45 - Marvin Hohlfeld

Status:	Needs feedback	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Custom fields	Estimated time:	0.00 hour
Target version:		Affected version:	2.4.1
Resolution:	Cant reproduce		
Description			
Let's say we have three Projects: Project A with TrackerA with Custom Fields F1 and F2 Project B with TrackerB with Custom Field F1 and F2 Project C with TrackerC with Custom Field F3 ...and a ticket created in Project A (with F1 and F2 filled) If we now >Edit< this ticket to move it to another Project and play with the project dropdown to trigger the ajax form update: (in this order:) 1. Select Project C: No custom fields are shown (expected: display of F3 with no value) 2. Select Project A: Default fields are shown but no custom fields! (expected: original display with F1 and F2 and their original values) 3. Select Project B: All correct again !?, F1 and F2 are displayed with their original values 4. Select Project A again: All correct This is reproducible at every time. I think there is some issue with the ajax form update, when try to choose between projects with different trackers and custom fields?			

History

#1 - 2014-02-15 11:24 - Jean-Philippe Lang

- Status changed from New to Needs feedback

- Resolution set to Cant reproduce

This scenario works for me. Does project C have the same trackers than project A and B?

#2 - 2014-02-25 08:53 - Marvin Hohlfeld

- File redmine-customField-issue.png added

Yes, all projects have different trackers (which shares some custom fields and some not)

I have attached screenshots to show the issue. The first form is only to show the expected output, when changing the project in the second form from B to A. (just selected another project without any saving!)
