

Redmine - Feature #16093

Emails sent out by Redmine are identical

Description <p>While starting to use Redmine a lot more, we're running into the issue that all the emails come from a single email address, and they all look the same. This is, in a way, exactly as it should be - but it makes it hard to create rules for filtering and organizing such notifications. It would be nice to have some hint about who generated the email.</p> <p>I see that GitHub does the same, but with one clever refinement: the email <i>address</i> is the same, but the person's name specified with that address is the name of the originator.</p> <p>Would it be possible to implement this idea in Redmine? One option I can think of is that some special characters in the email field set in the admin pages get replaced when creating a new email. In our case, that would be the username of the person causing the email to be generated: issue creator, wiki editor, forum poster, etc.</p> <p>The resulting email would still appear to come from a single email address, but email apps can then show <i>who</i> in the Redmine setup generated the message.</p> <p>So if the Emission email address field on the Email notifications page is set to say "<<me>> <redmine@example.com>", then this issue would have generated an issue with as sender "jcw <redmine@example.com>". Just enough extra detail for receivers of the email to see who it's really from, even though Redmine generated it.</p>
