<b>Description</b>			
<p>I would like to encrypt some issues, in fact some fields for some issues or simply the existence of an issue. A password (or better a certificate?) would be required to decrypt them.</p> <p>The reason is that I would like administrators not allowed nor able to read some issues. Imagine an issue that talks about salary in a company, I would prefer that IT administrators can't read them in the DB....</p> <p>thank you</p>
