Target version:		Affected version:	2.4.0
Resolution:			
Description			
<p>When displaying fields containing mixed latin and arabic characters, the formatting get messy. The reader cannot tell where the sentence starts and where it ends. Arabic words get wrapped in a peculiar way around Latin words (and/or vice versa).</p> <p>I would assume this is the case for Hebrew characters as well since it is also a Right To Left language.</p> <p>This is a well known issue:</p> <p>http://www.w3.org/TR/WCAG20-TECHS/H34 http://www.w3.org/International/articles/inline-bidi-markup/</p>			

History

#1 - 2014-03-19 16:06 - Ouss Orange

The method Facebook is using to solve this issue works very well

#2 - 2014-04-17 10:13 - Toshi MARUYAMA

- Category changed from Text formatting to l18n
