Description

Hi,

it is impossible so far to know which standard fields have been assigned in the tracker configuration :

In the tracker admin page, you can choose to display or not a standard field. I find nowhere a RESTful request that would give me the information that a specific field is activated or not for a given tracker...

That lack prevents the issue structure automatic discovery (and it is quite bugging me), is there any plan to make this possible ?

(BTW, I also started a forum post about this : <http://www.redmine.org/boards/4/topics/41951>)
