

Redmine - Patch #16719

Redmine.pm patch for HTTP access of repositories by repo-name

2014-04-18 14:10 - David Rahusen

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM extra	Estimated time:	0.00 hour
Target version:			
Description			
<p>I modified extra/svn/Redmine.pm in order to provide access to repositories by repo-name rather than project-identifier. The modification itself is basically done by an extended SQL query.</p> <p>This modification is especially necessary in order to enable access in case of multiple repositories per project.</p> <p>The patch seems to be working, but should be double checked by another person!</p>
