Description

Redmine v2.5.1

When using `{{thumbnail(filename.png)}}` in a comment, the email sent to notify related users does not show the image. The `<img>` source starts with `/attachments`. This is because relative url is used in `thumbnail` macro when processing the text.

To fix this, we should use the `url_for` argument `:only_path => false`, so that the generated urls are absolute.

The fix is in the patch and we are using it confidently in our system.
