

Redmine - Feature #1707

Sending e-mail to roles involved on status changed.

Resolution:			
Description Typically we have different teams involved on a project, related by strict redmine workflow. When an issue status changes, we have to notify to a team, not a person, that this issue is available for their work. I explain better. When an issue is open, we have a developement team that has to be involved. When someone of developement resolve it, T&Q team, the only role that can manage this status, has to test it, but developement don't know who will test it. We are asking a feature that follows the workflow and send to people belonging to the role that can manage new status a mail, so they can start their job. Thanks a lot, Andrea

This is possible to do using plugins. In fact there are two plugins that does this exactly:

- 1. [Mail wrapper](#)
- 2. [Mail Status Plugin](#)

Hope this helps.
