History

#1 - 2008-08-04 16:53 - Billy Ma

I was able to duplicate the problem on my Mac OS X.

This problem is related to RedCloth. I was told that RedCloth did a complete rewrite of their code with version 3.0.4, which Redmine depends on.

You can do one of the following to solve the problem:

1. Remove all the previous version of RedCloth and keep version 3.0.4.
2. Remove all versions of RedCloth and use the file that comes with Redmine

You should be able to run it with any problem.

#2 - 2008-08-05 09:28 - Pieter Claerhout

- Status changed from New to Resolved

I removed all versions of RedCloth I've had installed and now it's working fine.

What's strange however that the only versions I had installed were 3.0.4 and 4.0.1.

RedCloth had a major update with 4.0, so no surprise it breaks. Weird is, however, that Redmine apparently only tries loads version 4 of the RedCloth gem when running under Passenger.

So this might well be a Passenger bug, not a Redmine one, but I don't think this issue is resolved yet. Uninstalling RedCloth is a workaround at best.

- Resolution set to Duplicate

This is not related to Phusion Passenger, the exact problem is described in [#1754](#).
