

Redmine - Defect #17211

Assigning Parent Project when Copying Project

2014-06-17 23:43 - James H

Status:	Closed	Start date:	
Priority:	Low	Due date:	
Assignee:		% Done:	0%
Category:	Project settings	Estimated time:	0.00 hour
Target version:		Affected version:	2.4.2
Resolution:	Cant reproduce		
Description Assignment of Parent Project for a project you are copying does not "stick" until the project first creates. When I try to assign a parent project to a project while trying to create a copy of a project, everything else seems to go through except for the parent project field. After clicking "Copy" and looking at the project page shows the new copied project on the top level. I have to go into the project settings and assign it and "save" in order for it to go through correctly. Happens all the time for me...

History

#1 - 2014-06-26 21:30 - Jean-Philippe Lang

- Resolution set to Cant reproduce

Tested with 2.4-stable and trunk, works fine for me.

- Status changed from New to Needs feedback

#3 - 2014-07-18 02:19 - James H

- File SubProject Designation.png added

It still does it for us.

I have included a screenshot of before & after "Copy" has been pressed.

Subproject is selected before "Copy" and then I scroll down and click "Copy"
The project is created but the "Subproject of" field becomes empty.

I have not changed any of the ruby code.

New project

Name *

Description **B** *I* U ~~S~~ **C** H1 H2 H3 pre

Group Project for meetings, good reference documents, and other issues

Identifier *

Length between 1 and 100 characters. Only lower case letters (a-z), numbers, dashes and underscores are allowed, must start with a lower case letter.
Once saved, the identifier cannot be changed.

Need more information as we cannot reproduce.

[Can you provide the following:](#)

- Plugins installed (if any)
- Excerpt of production log after the copy is executed.

#5 - 2014-07-18 18:16 - James H

No plugins.

So I did some testing:

Subprojects do not get assigned correctly during the copy action when issues have problems copying over.
Some of my issues in the "copy from" project could not copy over successfully due to certain trackers being disabled for the project. Apparently thats the only time when the subproject returns blank.

Sort of related to [#17499](#)
