Description

I'm setting up a Redmine with Bitnami Stack. All works but sending email not.

Environment:

- Redmine version: 2.5.1.stable
- Ruby version: 1.9.3-p545 (2014-02-24) [x86_64-linux]
- Rails version: 3.2.17
- Environment: production
- Database adapter: Mysql2

SCM:

- Subversion: 1.8.8
- Git: 1.9.0

Filesystem

Redmine plugins:

- no plugin installed

I googled through web, I find the solution:

http://www.redmine.org/boards/2/topics/13625?r=15681 referenced:

the action mailer cannot handle ssl smtp server correctly. the referenced url gives a bug fix for redmine (or for rails)

I tried that smtp settings does have a ssl option 
so currently we do not need the mailer_ext.rb patch file to work with SSL smtp server. but the ssl option is not mentioned in current doc 

default:
  # Outgoing emails configuration (see examples above)
  email_delivery:
    delivery_method: :smtp
  smtp_settings:
    address: smtp.domain.com
    port: 465
    ssl: true
    enable_starttls_auto: true
    domain: domain.com
    authentication: :login
    user_name: redmine@domain.com
    password: xxxx
