Description

I'm setting up a Redmine with Bitnami Stack. All works but sending email not.

Environment:

Redmine version 2.5.1.stable
Ruby version 1.9.3-p545 (2014-02-24) [x86_64-linux]
Rails version 3.2.17
Environment production
Database adapter Mysql2

SCM:

Subversion 1.8.8
Git 1.9.0

Redmine plugins:

no plugin installed

I googled through web, I find the solution:
http://www.redmine.org/boards/2/topics/13625?r=15681 referenced:

the action mailer cannot handle ssl smtp server correctly. the referenced url gives a bug fix for redmine (or for rails)

I tried that smtp settings does have a ssl option
so currently we do not need the mailer_ext.rb patch file to work with SSL smtp server. but the ssl option is not mentioned in current doc

default:
# Outgoing emails configuration (see examples above)
email_delivery:
  delivery_method: :smtp
smtp_settings:
  address: smtp.domain.com
  port: 465
  ssl: true
  enable_starttls_auto: true
  domain: domain.com
  authentication: :login
  user_name: redmine@domain.com
  password: xxxx
