

Redmine - Defect #17298

Need new project when changing the svn repo address

2014-06-25 12:08 - moebius ever

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	2.4.5
Resolution:	Invalid		
Description			
<p>Enviroment: Redmine version:2.4.5.stable Ruby version: 2.0.0-p451 (2014-02-24) [i686-linux] Rails version: 3.2.17 Enviroment: production Database adapter: Mysql2 SCM: Subversion: 1.6.11</p> <p>Hello, I'm a newbie. I installed redmine on CentOS 6.5 (i386) according to Redmine 2.0.3 with Subversion and LDAP Authentication (for Redmine and Subversion through Redmine) on Centos 6, i386 - detailed.Details was listed above. I found a problem in using, this problem could reproduce by these steps: 1.The host's IP is 192.168.1.4 2.login it as root 3.cd /var/www/repos 4.svnadmin create test 5.chown R -apache:apache test 6.login redmine server http://192.168.1.4 as administrator(Mine is admin) 7.Create a new project 'test' 8.In project 'test', through 'settings'Repositories'-New repository' ↵create repository. scm: subversion main reository: checked url:http://127.0.0.1/repos/test login: redmine password: xxxxxxxx 9.Through 'settings'-Repositories'-Members',add user 'redmine' 10.Click Repository menu before Settings menu, it works perfectly 11.But login the host again, do this: 12.login it as root 13.cd /var/www/repos 14.svnadmin create test1 15.chown R -apache:apache test1 16.login Redmine server http://192.168.1.4 as administrator(Mine is admin) 17.In project 'test', through 'settings'Repositories'-New repository' ↵create repository. scm: subversion main reository: checked url:http://127.0.0.1/repos/test1 login: redmine password: xxxxxxxx 18.Click Repository menu before Settings menu, it reports: 404 The entry or revision was not found in the repository. 19.Create a new project test1, repeat steps 8-10, there are no problems. 20.I tried test2 test3..., just like above.A new repos need a new project, or it cannot be accessed. 21.I think it's a problem, so report it.</p>			

History

#1 - 2014-06-25 12:27 - Toshi MARUYAMA

- Category changed from Accounts / authentication to SCM
- Status changed from New to Closed
- Resolution set to Invalid

If there is no revisions on SVN, redmine shows "The entry or revision was not found in the repository".

#2 - 2014-06-26 03:26 - moebius ever

While redmine shows "The entry or revision was not found in the repository", Tortoissvn can't access the repository either, all users in redmine is invalid. I think no revisions are not the point.

#3 - 2014-06-26 03:45 - moebius ever

- Status changed from Closed to Reopened

I think the problem was caused by 'Working authentication with Redmine's built-in database' in [Redmine 2.0.3 with Subversion and LDAP Authentication \(for Redmine and Subversion through Redmine\) on Centos 6, i386 - detailed](#)

#4 - 2014-06-26 05:39 - Toshi MARUYAMA

- Status changed from Reopened to Needs feedback

Do you use Redmine.pm?

Yes, I followed this:

```
mkdir /usr/lib/perl5/vendor_perl/Apache
ln -s /var/www/redmine/extra/svn/Redmine.pm /usr/lib/perl5/vendor_perl/Apache/Redmine.pm
```

- Status changed from Needs feedback to Closed

Thank you.
But we cannot support individual server setting.
Please use forum and open new issue if you certain Redmine issue.

#7 - 2014-06-27 07:48 - moebius ever

Problem was resolved.
