Redmine - Defect #1730

Private projects with public subprojects disclose the parent project

2008-08-01 16:53 - micah anderson

Status:	Closed	**Start date:**	2008-08-01
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	100%
Category:	Projects	**Estimated time:**	0.00 hour
Target version:			
Resolution:	Fixed	**Affected version:**	

Description

If you create a private project, the project is not visible to users who are not signed in. This is good and what is expected. However, if you add a subproject to this private project and make that subproject public, then the parent project becomes visible in the project list. This is unexpected, and probably should not happen.

This is using 0.7.devel.1625 (MySQL)

What project list exactly ? The drop-down (quick jump) project list or the project list at /projects ?

#2 - 2008-08-02 13:58 - micah anderson

The project list at /projects, as well as the pull down menu and the home page where it says "Latest Projects" all list the parent project that is not marked public.

This seems to be fixed in the new 0.8.0-RC1. Just tested it and private parent projects are only showed in the stated views when:

- the logged-in user has a role on the project itself
- or when the logged-in user has a role on a child project (though the user receives a 403-error when selecting the parent-project for which he doesn't have a role).

Please provide some feedback of your experiences... ;-)

- Status changed from New to Resolved

- % Done changed from 0 to 100

Hello,

I've just installed 0.80 and it does indeed look like this has been resolved.

Thanks a lot, redmine is truely great.

We probably shouldn't be displaying links to users that will 403 on them. :(

This is fixed in the current trunk (which will become Redmine 0.9.0).
