Target version:	
Resolution:	
Description	
<p>i'd like to be able to remove the application title text completely from all pages, in favour of a graphical title (i currently specify a graphical title via a themed application.css file).</p> <p>as a workaround, I tried leaving the application title blank, but that results in an empty title in the browser window.</p>

This can be entirely done in css:

```
/* load the default Redmine stylesheet */
@import url(../stylesheets/application.css);

/* add a logo in the header */
#header {
    background: #507AAA url(../images/logo.png) no-repeat 2px;
    padding-left: 210px;
}

#header h1 { display:none; }
```

interesting hack, but it's not as clean as i'd like it to be. ideally i'd like a "graphical title" setting with an "upload" dialog for the title graphic. when using a graphical title, redmine would automatically hide the text title, but still set the html <title> tag correctly.

+1. I would like to have something similar but a combination of Text and Image. Currently, the settings page allows to set the Application Title. However, if one want's to put the Logo or any graphic - one needs to modify the code. Either application.css or files in layout. I think the Admin setting's page should allow to select/upload the image and set the size so that without modifying the code.

I think this would be a very small change in the Redmine code - we must have this.
