Description

at the moment there are several possibilities to add custom user queries for the issues page.

maybe you can add a field in the query edit form that is like
"shown issues per page" with default value "default" and more options (50,100,150,200,250,500,all)?

Having this option it would be possible to show all issues after one click (and not one click, scrolling, another click, ...)
