Description			
<p>at the moment there are several possibilities to add custom user queries for the issues page.</p> <p>maybe you can add a field in the query edit form that is like "shown issues per page" with default value "default" and more options (50,100,150,200,250,500,all)?</p> <p>Having this option it would be possible to show all issues after one click (and not one click, scrolling, another click, ...)</p>
