Resolution:				

Description

Requesting feature for allowing setting visibility and use-ability settings for Issue Trackers per role per project.

Would like to have a way to:

- Allow only certain roles to create certain issue tracker issues for a particular project.
- Allow certain roles the ability to "edit" or "update" that particular issue tracker type.
- Allow certain roles the ability to view that particular issue tracker type.
- Disallow certain roles from being able to view that particular issue tracker type.

I fully support this.

In our organisation we do have a project with feature and defect and we would like the role tester can ONLY create defect type ticket and not feature.

I support this also.
We want to have a full transparency until a certain level. But the concrete "Tasks" for a person should not been seen by a bigger audience.

Hi All,

I think tracker wise control can be handled through this plugin http://www.redmine.org/plugins/redmine_track_control
As this is a plugin and not a core part of redmine, but for the time being, this plugin will quench your thirst.

Hi Toshi MARUYAMA,

It is my humble request to include this in redmine core asap.

Have you tried the plugin? If so, what version of redmine?

I for one, cannot get those plugins to work on any of the newer versions.

I didn't try it. But I will test it in my Test Server and let you know about its status very soon.

Hi there,

I tried this plugin in 2.4.2 & 2.5.2 version and it worked fine. This plugin helps you to set role wise control over tracker creation...:)

#9 - 2014-09-25 18:51 - James H

Hmm.. I tried it on those versions..

I get errors when trying certain things; and when creating issues, it behaves oddly. I cannot get it function correctly.
The names of the trackers also is bugged, but thats just cosmetic.

You have tried testing out creating issues with different users/roles?
Installation of the plugin goes smoothly, but the actual functionality with redmine as a whole does not work for me.

FTR: [#285](#) does already great part of this feature (except "per project")
