Description			
Hello,			
I would like to propose a feature for redmine:			
-the possibility of disabling internal authentication after adding a ldap server.			
Martin Denizet was kind enough to provide a solution here, but maybe someone could port it into the main trunk of redmine so it could be a feature in future versions:			
http://www.redmine.org/boards/2/topics/42903?r=42951#message-42951			
Thank you,			
lancu
