

Redmine - Defect #17609

The issue ID number increments a lot for no apparent reason (example 2 subsequent id's are 1299 and the next one is 2297)

Target version:		Affected version:	2.3.2
Resolution:	Invalid		
Description			
The issue ID number increments a lot for no apparent reason (example 2 subsequent id's are 1299 and the next one is 2297)			
We have had the same issue again now, it jumped from 2362 to 3355.			
The backend database we use is a SQL Server 2012 Express. Apart from that I do not see an entry in the log pointing to why it behaves like this.			
Anyone has an idea how this happens/can happen ? Or how to avoid it in the future ?			

History

I found something about this

<http://stackoverflow.com/questions/17587094/identity-column-value-suddenly-jumps-to-1001-in-sql-server>

#2 - 2019-01-10 04:34 - Marius BĂLTEANU

- Status changed from New to Closed

- Resolution set to Invalid

I think that it is a problem generated by the SQL Server and not by Redmine. Please reopen if I'm wrong.
