Resolution:	Invalid		
Description			
Hello Everybody			
I am using Redmine 2.4.5 in ruby 1.9.3 and passenger 4.0.48. I have recently started to get "No route to host - connect(2) (Errno::EHOSTUNREACH)" error message in Passenger logs after Redmine being stopped automatically.			
Now, i am completely not able to start Redmine via Passenger as it would refuse to start with that error message. Now i am using Redmine over Webrick by restarting Webrick often, as it would also stop within a little time with no errors as i do not know where can i find the Webrick logs.			
We are using multiple versions Redmine in our server without any problem, but we are facing so much problem recently in this specific installation of redmine.			
All instance of Redmine uses distinct port numbers and i have changed port number of this instance to different numbers multiple times and didn't find any noticeable improvement.			
Please help me to resolve this issue soon, as i am getting lot of pressure from my teams.

Please use forum.
It is not related Redmine core.

I have posted the problem here after posting it in forums/irc.
Nobody are evening trying to help me on this.
My team is fed up in long downtime in this problem.
So, only to escalate the issue i have posted it here.
