Description

I've added some version into my project and it looks like:

build 4
build 5
build 3

But how I can to sort it for:

build 5
build 4
build 3

or

build 3
build 4
build 5

I think it's important feature.

History

#1 - 2008-08-13 23:50 - Mischa The Evil

By sorting the issue-list by version the issues are actually sorted by the respective due-date of the versions which are set @ /versions/edit/<versionid>.

#2 - 2009-02-01 21:45 - Jean-Philippe Lang

- Status changed from New to Closed

Versions are sorted by due date then name.
