Description

Hello,

is there any solution for our problem? Because we have a lot of new standard projects (100+ per month) and for every project we need automatically generate some tickets (56+). This tickets need diffrent beginning and delivery dates.

This would save us a lot of time.

Thanks a lot!

- Subject changed from if i create a new project i want to automatically open a set of tickets. to Automatically open issues on project creation
- Category deleted (Plugin Request)
- Status changed from New to Closed
- Resolution set to Invalid

There's no solution for that in Redmine core and I don't see it a near future. You can probably make some scripting with the [Rest Api](#), I already do that at work to automate the creation of issues on certain events. If you don't know how to do that maybe you could hire a dev for 2 or 3 days.

As it won't be integrated in Redmine core I close the issue.
