

Redmine - Feature #17844

A help intercept or better options

Description	
<p>Currently the redmine "help" menu redirects to redmine.org. What I'd like to see is a real help menu within the actual site.</p> <p>Also, there should be a way for plugins to add their own help files under the help menu.</p> <p>So when you hover over the help menu you'll see</p> <p>Help --> Time Tracker --> Import Projects</p> <p>Any ideas on how we can accomplish this?</p>

You can render hidden partial by base layout hook, and then show it by hover on help link
