**Description**

Attached to this issue, there is a fix for an issue that can occur if a users defines a query in another scope than where it is ultimately displayed. If the query define a filter which is not available in the current scope, rendering the filters form will throw a Javascript error resulting in a halt of Javascript execution on the respective page.

In our case at [Planio](#), we had a query that was defined on all projects. The query had a filter of project\_id. Now, the project\_id is only valid outside of a project. If the query is run inside of a project, the project\_id filter will not be added to the available\_filters. However, the defined filter is still attempted to be rendered, as the view just loops over all defined filters in the query. This results in a javascript error as during rendering in the browser, the filter can not be added as it is not included in available filters.

The attached patch fixes this issue. It ensures that only those filters are attempted to be rendered that are actually available in the current scope. This fixes the Javascript error.

#### History

##### #1 - 2014-09-15 18:16 - Jan from Planio [www.plan.io](#)

- Status changed from New to Resolved
- Assignee set to Jean-Baptiste Barth
- Target version set to Candidate for next minor release

Here's another fresh and easy one, Jean-Baptiste, if you like.

##### #2 - 2014-09-16 23:59 - Jean-Baptiste Barth

No problem merging that, seems reasonable, but I don't reproduce the problem on my 2.5.2 instance. Say I have a project with id 1, I define a query on the cross-projects issue page with a condition on project\_id = 1. When I go to the project (or an other one), the "addFilter" line is present for sure, but it doesn't break and looks like valid JS. Am I missing something ?

I'd just like to understand the problem and the conditions in which it occurs. And maybe write a tiny test as a documentation for the future.

Thanks!

##### #3 - 2014-09-17 16:56 - Holger Just

After some deeper investigation, it turns out, that this is a duplicate of [#15190](#) and thus already fixed in Redmine. I guess, we can close this issue...

##### #4 - 2014-09-17 16:57 - Jan from Planio [www.plan.io](#)

- Tracker changed from Patch to Defect
- Status changed from Resolved to Closed
- Target version deleted (Candidate for next minor release)
- Resolution set to Duplicate

sorry for the fuss...
